MODERN MILITARY TECHNIQUES **FIGHTERS**

Fighter aircraft play a vital part in modern defence. Supersonic interceptors, carrying powerful radar and long-range missiles, patrol vast regions of airspace, ready and able to pick off aerial intruders a hundred miles away. At closer range, air combat fighters stand ready to dash into the skies and fight it out with guns and air-to-air missiles.

With detailed explanatory illustrations, Malcolm Lowe describes the latest developments in fighter design and deployment.

Essential reading for everyone interested in MODERN MILITARY TECHNIQUES.
